(ICOS-) ICOS CORP.

Screening assay for modulators of integrin binding - using immobilised or labelled alpha-d polypeptide, useful for, e.g. treating type-I diabetes. Example 5; Fig 1A-D; 106pp; English. This sequence represents a human beta-integrin CD11b subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha-d binding partner, one of which is immobilised and the other of which is labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comprising the cytoplasmic, transmembrane or extracellular domain of alpha-d. Compounds that modulate alpha-d binding could be used to treat

Use of novel anti-alpha integrin d monoclonal antibodies to inhibit macrophage infiltration and reduce inflammation at central nervous system injury sites.

Example 5; Fig 1; 270pp; English.

Integring are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukocyte cintegrins, Leu-CAMS, leukointegrins or beta2 integrins. Beta2 integrins have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CD11b. This sequence was used in an alignment to identify a novel beta2 integrin alpha cyproximately 60% identity to the protein sequence of alpha_d. The Alpha_d gene and protein may be useful in therapy for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosclerosis, multiple sclerosis, astima, psoriasis, lung inflammation, acute respiratory distress syndrome, rheumatorid arthritis and leukocyte adhesion deficiency (LAD). In addition, anti-alpha d monoclonal antibodies may be used in the inhibition of macrophage infiltration at the site of a central nervous system injury. The monoclonal antibodies can also be used to detect and diagnose Crohn's disease

This invention relates to a modified integrin-I or integrin I-like domain to polypeptide comprising at least one disulfide bond so that the domain is stabilised in a desired conformation. The polypeptide of the invention may have antiinflammatory or imunosuppressive activities. The invention may have antiinflammatory or imunosuppressive activities. The invention is mannatory or imunosuppressive activities. The invention comparing an integrin appear conformation and are useful as invention, or antibodies that selectively bind to integrin I-C domain; and for identifying a modifiator of integrin activity, or of invention, or antibodies (preferably anti-LRA-I antibody) is useful for treating or preventing an integrin mediated disorder which is an comparing of an integrin to a cognate ligand such as Crohn's disease, nephritis, human immunodeficiency virus (HIV), myocardial infarction, Slorgen's syndrome, rheumatoid arthritis, dermatitis. A therapeutic composition comprising the peptide of the invention is useful for composition mediated disorder in a subject. The polypeptides of integrin mediated disorder in a subject. The polypeptides of integrin-mediated disorder in a subject. The polypeptides of integrin-mediated disorder in a subject. The mutant the human cinception.

The invention relates to promoting locomotor recovery, inhibiting an accomplot damage, limiting locomotor impairment, or limiting autonomic and sensory defenction following spinal cord injury by administering an anti-alpha d (Betaz integrin alpha2 subumit) monoclonal antibody to a nati-alpha d (Betaz integrin alpha2 subumit) monoclonal antibody to a spinal cord injury victim. The method also involves the use of a ligand selected from ICAM-1 (intracellular cell adhesion molecule, vascular cell adhesion molecule. The method is useful for promoting impairment, or limiting autonomic and sensory dysfunction following spinal cord injury. In particular, the spinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrin alphab colbws and proteins, for use in raising the antibodies. Beta2 integrins are implicated in diseases such as LAD (leukocyte adhesion deficiency, inflammatory response, diabetes, multiple sclerosis, arthritis, graft atherosclerosis, inflammatory bowel disease, Crohn's disease, ulcerative collits, immune complex alveolitis and leukaemia. The present sequence is a Beta2 integrin alpha protein sequence RLNQTVIWDRPQVTFSENLSSTCHTKERLPSHSDFLABLRKAPVVNCSIAVCQRIQCDIP 1036 Beta2 integrin; alphaD subunit; CD11c subunit; CD11b subunit; LAD; leukcoyte adhetion deficiency; inflammatory response; diabetes; multiple sclerosis, arthitis; graft atherosclerosis; neuroprotective; inflammatory bowel disease; Crohn's disease; ulcerative colitis; immune complex alveolitis; leukaemia; ICAM.R; VCAM-1; anti-inflammatory; intracellular cell adhesion molecule; vascular cell adhesion molecule; locomotor recovery; locomotor damage; locomotor impairment; autonomic dysfunction; sensory dysfunction; spinal cord injury. The invention comprises structurally biased variant integrin inserted (I) domain proteins, wherein the alterations to the protein occur in at least we noncontinuous regions. Specifically the the variant integrin I domain proteins are structurally biased to exist in the open conformation, thereby altering the binding ability of the protein. The invention also comprises nucleic acids encoding the variant integrin I domain proteins and nucleic acids encoding the variant integrin I domain proteins.

The integrin I domain proteins and nucleic acids are useful for treating, preventing or suppressing integrin related inflammatory and immunological disorders (e.g. rheumatoid arthritis). The variant integrin I domain proteins and nucleic acids can also be used for treating ischaemia/ repertusion (e.g. hypovolemic shock); infarction; cerebral shock; viral infection; and cancer. The variant integrin I domain nucleic acids and proteins may be used in gene therapy, as vaccines and to screen for the abbanit of integrin
                                                                                                                                                                                                                                                                                                                          Mac-1, integrin alpha subunit; variant integrin inserted domain protein; open conformation; integrin related inflammatory disorder; integrin related immunological disorder; rheumatoid arthritis; ischaemia; reperfusion; hypovolemic shock; infarction; cerebral shock; viral infection; cancer; gene therapy; vaccine;

PA Thompson Leabetter JA, Hayden-Leabetter MS, WPI; 2003-801317/75. New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease.

Disclosure; SEQ ID NO 176; 157pp; English.

The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide that is fused to an immunoglobulin hasey chain comprising a binding domain polypeptide that is fused to the hinge region contact region polypeptide that is fused to the hinge region polypeptide that is fused to the case to the hinge region polypeptide comprises; a wild-type human IgG1 immunoglobulin hinge region polypeptide comprises; a wild-type human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more oysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more oysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains 2 cysteine residues where the first cysteine is not mutated; a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues and a mutated human IgG1 immunoglobulin hinge region polypeptide contains on cysteine residues and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues of at least one immunoglobulin hinge region polypeptide contains or oysteine residues and a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues of at least one immunoglobulin fusion protein is capable of at least one immunological activity comprising antibody dependent cell-mediated cytocoxicity (ADCC) and complement fixation. The binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polynuclectide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression construct, producing the binding domain-immunoglobulin immunoglobulin immunoglobulin are expension of a host cell transformed or transfected with a recombinant expression

pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polymulocide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, mysthenia gravis, Grave's disease, type I diabetes mellitus, multiple sollerosis or autoimmune disease. The present sequence is a binding domain-immunoglobulin fusion protein-associated protein sequence. Note: The sequence data for this patent formed part of the printed specification and is also available in electronic format directly from USPTO at sequence. Late the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mac-1 alpha subunit is involved in the response to inflammation, i.e. recognition of and migration to sites of inflammation. It also attaches to cellular substrates as part of this function making it useful in visualising endothelial tissue. Mac-1 is a member of the Integrin Gene superfamily.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Clone lambda X47 was isolated from a cDNA library constructed from total RNA extracted from phorbol myristate acetate stimulated HL-60 replanded with cligonucleotide problemonocytic cells. The library was screened with oligonucleotide problemonocytic cells. The library was screened with oligonucleotide attached to appropriate control elements and expressed in prokaryotic and eukaryotic cells. The protein can be used to treat or prevent rhinoviral infection because it interacts with ICPM-1 and inhibits cell-virus attachment. It can also be used as an anti-inflammatory agent.                                                                                                                                                                                                                                                in cellular adhesion. Integrine are made up of an alpha subunit and a in cellular adhesion. Integrine are made up of an alpha subunit and a beta subunit. One class of human integring are restricted to expression in white blood cells and have a common beta2 subunit: the leukocyte integrins, leu-CAMS, leukointegrins or beta2 integrins. Beta2 integrins have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit cDlic. This sequence was used in an alignment to identify a novel beta2 integrin alpha subunit: alpha d (AAMS0014 and AAB07359). The present sequence has subunit: alpha d (AAMS0014) in the response of alpha d. The Alpha d gene and protein may be useful in therapy for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosalerosis, multiple celerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome, rheumatoid arthritis and leukocyte adhesion deficiency (LAD). In addition, anti-alpha d monoclonal antibodies may be used in the system injury. The monoclonal antibodies can also be used to detect and diagnose Crohn's disease
                                                                                                                                                             Use of novel anti-alpha integrin d monoclonal antibodies to inhibit macrophage infiltration and reduce inflammation at central nervous system injury sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RLQVPVBAVNMSLGLSLAATTSPPQLLACGPTVHQTCSENTYVKGLCFLFGSNLRQQPQK 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                 The invention relates to promoting locomotor recovery, inhibiting commotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury by administering an anti-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a spinal cord injury victim. The method also involves the use of a ligand selected from ICAM-1 (intracellular cell adhesion molecule, vascular cell adhesion molecule). The method is useful for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury. In particular, the spinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrins contemplicated in diseases such as IAM (leukocyte adhesion deficiency, are implicated in diseases such as IAM) (leukocyte adhesion deficiency, are implicated in diseases such as IAM)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     inflammatory response, diabotes, multiple sclerosis, arthritis, graft atherosclerosis, inflammatory bowel disease, Crohn's disease, ulcerative colitis, inmune complex alveolitis and leukaemia. The present sequence is Beta2 integrin alpha subunit sequence included for comparison with the Beta2 integrin alphaD protein sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DFDALKDIQNQLKEKIFALEGTETISSSSPELEMAQEGFSAVFTPDGPVLGAVGSFTWSG 377

The invention describes genes (1) which are differentially regulated in prostate cancer. (2) Is useful for diagnosing a prostate cancer in a sample comprising prostate tissue, which involves determining the number of target genes which are differentially regulated in the sample, where the number is indicative of the probability that the sample comprises prostate cancer. (2) Is useful for assessing a therapeutic or preventive intervention in a subject having a prostate cancer, which involves determining the expression levels in a sample comprising prostate tissue of target genes which are differentially-regulated in prostate cancer. Preferably, the expression levels in a sample comprising prostate cancer of target genes which are differentially-regulated in prostate cancer colls, which involves contacting a polypeptide differentially-regulated in prostate cancer calls with a test agent under conditions effective for the test agent to modulate a biological activity of the polypeptide, and determining whether the test agent modulates the biological activity. (1) is useful as molecular markers, as exput sargets, and for detecting, is useful as molecular markers, as full transfers, and for detecting, prognosting, stading, grading, predistoring, prognosticating, prognosticating, products are used in the diagnostic test to assay for presence of cancer conditions especially relating to prostate cancer. (1) and its expression products are used in the diagnostic test to assay for presence of cancer, its stage of development, the nature of genetic defect, etc. The modulate propression problems as target for therapy or drug of cancer, its stage of development, the nature of genetic defect, etc. The polypeptide and thus so in the polypeptide and thus to incondent permit polypeptide and thus conditions are used in the diagnosic cancer of the polypeptide and thus of specific genes, and groups of genes, expressed in pathways which are useful in diagnosit, therapeutic, and clinically relating the propresed cancer. The identific
                                                                                                                                Novel genes which are differentially regulated in prostate cancer, useful for diagnosing prostate cancer in prostate tissue sample and assessing therapeutic or preventive intervention in prostate cancer patients.
                                                                                                                                                                                                                                         Claim 1; Page 225-228; 416pp; English

The cDNA was manipulated to allow expression of recombinant alpha-d subunit in COS and CHO cells

                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This polypeptide comprises a novel human beta 2 integrin subunit, designated alpha d. Its sequence was deduced from a cDNA clone (see AAT79220) isolated from a spleen cDNA library. Alpha d is involved in cell migration, phagocytosis and cell-cell interaction. Recombinant alpha a polypeptides can be expressed in transformed host cells for use in assays for identifying antibodies or other compounds that modulate alpha activity or which modulate the interaction between alpha d and a distand, for treating or preventing diseases in which macrophages are implicated. Treatment is applicable to disease states in which alpha d binding, or localised accumulation of cells which express alpha d, is implicated such as such as type I diabetes, atherosclerosis, multiple sclerosis, asthma, psociasis, lung inflammation, acute respiratory distress syndrome and rheumatoid arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RLOVPVEAVNMSLGLSLAATTSPPQLLACGPTVHQTCSENTYVKGLCFLFGSNLRQQPQK 120

This represents a human beta2 integrin alpha subunit (alpha d)

polymeptide. This is used in the methods of the invention for isolating a polymeptide encoding a protein that binds to alpha d. The method comprises transforming or transfecting host calls with a DNA construct comprises transforming or transfecting host calls with a DNA construct transcription factor having a DNA-binding domain and an activating transcription factor having a DNA-binding domain or at least part of alpha d and either the DNA-binding domain or the activating domain of the transcription factor and a library of hybrid DNA sequences encoding fusions of at least part of putative alpha d-binding proteins and the DNA-binding domain or the activating domain of the transcription factor which is not incorporated in the first fusion are expressed in the host cells. The binding of an alpha d-binding protein to alpha d in a particular host cell is detected by determining production of the reporter gene product in the cell. The hybrid DNA sequence encoding the reporter gene product in the cell. The hybrid DNA sequence encoding the reporter gene product in the cell. The hybrid DNA sequence encoding the reporter gene product in the cell. The hybrid DNA sequence encoding the reporter gene product in the cell. The hybrid DNA sequence encoding the useful for treating graft arteriosclerosis, alberosclerosis, diabetes, inflammatory bowel disease, arthritis and multiple sclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 RIQVPVEAVNMSLGLSLAATTSPPQLLACGPTVHQTCSENTYVKGLCFLFGSNLRQQPQK 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolation of DNA encoding protein that binds to integrin subunit - using recombinant cells containing reporter-transactivator construct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FNLDTENAMTFQENARGFGQSVVQLQGSRVVVGAPQRIVAANQRGSLYQCDYSTGSCEPI
